

I am a licensed amateur radio operator, callsign KCONHE. I operate in the VHF/UHF frequency range. After viewing the various information regarding Broadband Over PowerLines (BPL) I am very concerned about the interference that will occur from leakage from those power lines. The evidence points to extreme interference from this procedure. Testing should be done carefully and completely to prove that there will be NO interference to the licensed amateurs working in the affected frequencies that include not only VHF/UHF but in the HF range. So far the evidence shows interference levels that will make amateur radio nearly, if not completely, useless in areas where BPL is used. I ask you to take steps slowly and carefully to make sure that the various amateurs and other people using wireless communications are not affected.

Respectfully,
Steven M. Rowe
KCONHE
